

*Today's educational facilities utilize an increased number of computers, internet connections, security, interior/exterior lighting fixtures and communication systems. The integration of all these functional elements requires a complex network for energy distribution. The professionals of Uihlein Electric are experts in the design of power distribution systems. Whether developing a cost-efficient plan to bring a building to code compliance or constructing a sophisticated data/communication system, Uihlein Electric offers the best possible solution.*

## EXPERIENCE THAT COUNTS

The University School of Milwaukee involved a complex addition and renovation construction project that included a diverse mixture of components. Project areas included a new auditorium, hockey rink, gymnasium, theatre, shop areas, and music center, as well as the remodel of the food service and classroom spaces. All areas were constructed according to a concise phasing plan that assured that important owner milestones were met.

The customer's satisfaction with the project has resulted in a long term relationship that we consider to be the best indicator of a job well done.

## OUR CUSTOMERS SAY...

"Uihlein Electric is a very good fit for our organization. Their business approach to our project truly had our best long-term interests at the core. The installation process was extremely smooth. Uihlein is a very professional electrical contractor."

## PARTIAL PROJECT
